WORK EXPERIENCE

SHOPPE MEXICO - DISPUTAS
Atento 2022 agosto - 2023 febrero

Dispute Analyst and team leader in the customer service department at Shoppe. Over 7 months, I specialized in the detailed evaluation of user evidence for return decisions. I led a team of 5 people for 2 months, enhancing productivity and achieving an increase in Customer Satisfaction (CSAT)

FULL-STACK APPLICATIONS - ACADEMLO

Authentication **(Academlo)**

- I developed a secure authentication and password recovery application, covering both **front-end** and database aspects. I implemented technologies such as **React.js, Redux, JWT, Bcrypt, Express.js, Sequelize,** and **Nodemailer** to ensure security and functionality. The application provides a comprehensive and secure user experience, including account verification and password recovery

Ecommerce (Academlo)

- I developed an appliance e-commerce application that enables users to log in, make purchases, and access detailed product information. To achieve this, I created both the backend, including the database, and the frontend, using technologies such as **Redux** and **React Router DOM**. The result is a comprehensive platform that provides users with the ability to manage their purchases and efficiently explore household appliance products.
